

Containers

Conceitos básicos sobre Docker e Kubernetes

O que são containers?

- Aplicações virtualizadas
- A container is a standard unit of software that packages up code and all its dependencies so the application runs quickly and reliably from one computing environment to another.

Docker

- Docker engine
- A Docker container image is a lightweight, standalone, executable package of software that includes everything needed to run an application: code, runtime, system tools, system libraries and settings.

Docker-compose e docker swarm

- Services
- Cluster
